## Corporate Backgrounder

### INVERS in a nutshell

As the inventor of automated vehicle sharing and with 25+ years of experience, INVERS has created the shared mobility standards being widely used today and is one of the most established tech companies in the industry. With reliable telematics and customizable software solutions for fleet and telematics management, the company enables well-known shared mobility providers such as Tier, Share Now, Miles, Emmy, Getaround, Bounce and Clevershuttle to run and scale their shared mobility operations worldwide.

INVERS' goal is to make the global use of shared vehicles more convenient and affordable than ownership by empowering shared mobility operators worldwide with its technology. The solutions provide a single interface and a seamless experience to manage entire connected fleets with different vehicle types. INVERS develops and reliably maintains the fundamental building blocks of operators' tech stack. By doing this at scale, the company offers customers cost-efficient and easily implementable tech solutions,

giving visionary entrepreneurs and developers the independence and ease they need to unleash their creativity in building unique shared mobility services.

With more than 160 employees the company has already realized more than 350 shared mobility projects together with its customers. Based in three offices in Siegen, Cologne and Vancouver, INVERS serves customers in more than 50 countries.

INVERS is an independent and profitable company, which does not have to serve investor interests – the central interest of INVERS is the success of its customers.
